 @ <https://www.linkedin.com/in/praveen-ghimire-07805320b/>

I am passionate about building reliable backend systems, with a strong focus on writing efficient queries and designing robust APIs. I have worked on over 10 real-world projects across domains such as e-commerce, travel and tours, logistics, fitness, and agriculture, which has given me solid experience in solving practical business challenges. While my core expertise lies in backend development, I also have hands-on experience with frontend technologies, allowing me to contribute effectively across the full application lifecycle. I am detail-oriented, highly organized, and committed to delivering high-quality results. I am eager to explore emerging technologies, continuously improve my skills, and grow as a developer. I value workplaces that emphasize teamwork, honest feedback, personal development, and recognition of contributions.

EXPERIENCE

Node.js -Developer

Kathmandu, Bafal

Plex Bit Infosystems

Aug, 2025 - Present

Node.js Developer at Plex Bit Infosystems, leading the design and development of scalable e-commerce and multi-gym management systems with integrated delivery modules, leveraging FCM, WebSockets, and Google Maps APIs to enable real-time tracking, instant notifications, optimized routing, and reliable backend performance.

Node Js - Developer

Kathmandu, Samkhamul

Softbenz Infosys

Nov, 2023 - Aug, 2025

I worked as a Node.js developer at Softbenz, building efficient and scalable applications using Express.js and MongoDB. I contributed to client-facing projects such as Nepa-Courier (logistics system), NBM-Travel (travel agency platform), Blood Donation Management System (connecting donors and recipients), and SafalKrishak (poultry monitoring system). In addition, I worked on in-house production projects aimed at improving internal workflows and operational efficiency, focusing on optimized solution for problem, data management, and modular application design to ensure scalability and maintainability across all platforms.

MERN - Internship

Kathmandu

KWS Technology

Aug, 2023 - Nov, 2024

Here I have worked as a MERN stack developer but heavily as a backend developer. I worked with the Typescript, Node.js, Postgres, Prisma ORM, and many more technologies. Here, I worked on both in-house projects and Real-world projects.

EDUCATION

Masters in Information Technology

kathmandu

Patan Multiple Campus

Jan, 2026 - Present

Bachelor of Science in Computer Science and Information Technology

Lalitpur

Patan Multiple Campus

Mar, 2021 - Jul, 2025

+2

Kathmandu

Kathmandu Model School

Nov, 2018 - Nov, 2020

PROJECTS

Nepa Courier

This system leverages automation and digitalization to streamline business management by integrating logistics, tracking, accounting, and communication on a single platform. The system is scalable and easy to use, with support for multiple user roles through both user-based and modular-based authentication mechanisms for flexible and secure access.

Major tasks performed are mentioned below:

- User Authentication & Authorization: Designed role- and permission-based authentication combining user roles and modular permissions.
- Order Processing: Implemented order creation based on permissions for vendor staff, vendor, admin, and staff, with branch-based assignment.
- Pickup Management for Riders: Developed a system for assigning pickups to riders or leaving them unassigned; maintained data for statistics such as daily/monthly order pickups.
- Shipment Process: Managed safe transfer of orders from one branch to another without collisions or misplacement.
- Delivery Management: Handled order delivery from branch to rider and final delivery to customer.
- Return Orders Handling: Processed customer returns efficiently, ensuring accurate updates in the system.
- Announcements & Collaboration: Implemented announcements based on user type; internal/external commenting on orders; raising ticket on issue based on categories.
- Activity Logging: Implemented detailed logs for every order activity by each user.

Gym Grow

Gym Grow is a semi-SaaS platform used in the UK that allows multiple gym owners to register and manage one or more gyms under a single account. The system centralizes gym operations including member management, staff roles, class scheduling, communication, and payments. It integrates with external services like GHL for CRM and Stripe for payments, making the platform scalable and automation-friendly.

- User Authentication & Authorization: Implemented multi-tenant role- and permission-based access for gym owners, staff, and administrators with modular-level controls.
- Multi-Gym Management: Enabled gym owners to create and manage multiple gym locations under a single account with isolated data per gym.
- Member & Staff Management: Developed features to manage members, trainers, and staff including roles, memberships, and activity tracking.
- Class Scheduling & Programming: Built flexible class scheduling with trainer assignment, capacity control, and recurring class support.
- GHL (Go High Level) Integration: Synced user/member data with GHL, automatically creating and updating contacts; handled communication workflows (emails, follow-ups, automation) through GHL.
- Communication & Notifications: Implemented automated email notifications and event-based communication using GHL automation.
- Stripe Express Payment Integration: Created Stripe Express accounts for each gym owner directly from the system for independent payment processing.
- Subscription & Membership Payments: Managed recurring membership billing, payment status tracking, and webhook-based updates automatically.
- Dashboard & Reporting: Developed centralized dashboards for gym owners to track members, revenue, classes, and operational metrics.

Multiple Travel Website

These are travel agency websites that provide information about various travel packages, destinations, and services offered by the agency. Each website includes features such as detailed package pages, date-based and package-specific booking inquiries, and contact forms for lead management. The platforms support management of travel packages, regions, activities, and other services, allowing agencies to update content dynamically. Himalayan Bank is integrated as a payment partner to support secure international payments. Role- and permission-based authentication is implemented to ensure secure access control for admins and staff, along with content management features for maintaining travel-related information.

Oriflame Nepal

Oriflame is a cosmetics company founded in Sweden that has a location in Nepal. It uses a digital commerce platform to assist its statewide product distribution and sales. The internet commerce platform designed for this aim is called Oriflame Nepal. In order to improve user trust and platform dependability, I worked on order management, product management, and customer management. I also designed a product-specific review management system, integrated secure payment gateways, and introduced role-based admin authorisation using user roles and permissions.

Blood Management Platform

Created a Blood Management Platform that links blood donors and recipients in one system allowing for up-to-date donor lists and request handling. Set up role-based access control with different user permissions for donors, recipients, and admins to make sure

interactions are safe and smooth. The platform makes things clearer more reliable, and easier to access helping to close the gap between donors and people who need blood.

Materiallink (Ready for Production)

Materiallink is an online marketplace that serves the Tamil Nadu area offering a broad selection of building supplies with quick delivery times. Customers can place orders on the platform, and delivery workers log in to get instant alerts about their assigned deliveries. The system puts a lot of weight on handling orders well talking in real-time, and making delivery routes better to make sure building materials get to people all over the state and.
