## TECHNICAL SKILLS

---

**Languages:** JavaScript, TypeScript, C

**Frontend:** Next.js, ReactJS, AngularJS, Redux, Context API,

**Backend:** Node.js, Express.js, NestJS, LoopBack, MySQL, PostgreSQL, MongoDB, GraphQL, Socket.io

**Developer Tools:** Docker, MongoDB Compass, Swagger, Redux Toolkit, Git

## EXPERIENCE

---

### Full Stack Developer (Independent Consultant)

Dec 2025 - June 2026

- Delivered end-to-end web application projects for Bhutanese and Nepali clients, handling requirements, architecture, development, and deployment.
- Designed and developed scalable web applications and admin dashboards tailored to client needs using modern frontend and backend technologies.
- Built content-driven web applications configured with Strapi dashboard, implementing GraphQL queries for efficient and flexible data fetching.
- Managed VPS-based hosting environments, including server setup, application deployment, domain configuration, and SSL integration.
- Handled backend API development, database design, and optimization to ensure reliable performance and scalability.
- Collaborated directly with international clients, providing technical consultation, progress updates, and post-deployment support.

### Anvesh Technologies

Sept 2024 – Present

#### Full Stack Developer

- Led and managed interns and junior developers, streamlining their daily tasks and enhancing productivity through structured guidance and regular code reviews.
- Involved in building blockchain-integrated full-stack web applications, ensuring security and transparency in transactions.
- Designed and developed scalable backend architecture and database schemas to optimize data flow and application performance.
- Managed Contabo server network and used screen to host and maintain persistent server processes efficiently.
- Built and maintained interactive frontend dashboards with real-time data visualization using modern frameworks.
- Managed server configurations, optimized deployments, and implemented CI/CD pipelines for seamless application updates.
- Integrated third-party APIs and payment web services to enhance application functionalities.
- Optimized application performance by reducing API response times and improving database queries.

### Palm Mind Technologies

Mar 2023 – Sept 2024

#### Full Stack Developer

- Involved in building a custom dashboard application for users of the organization to whom the chatbot is supplied.
- Improved dashboard performance by 80% by upgrading the old dashboard from Angular 7 to Angular 17, utilizing NgRx for efficient state management.
- Developed interactive chats and charts, enhancing data visualization by 60%.
- Built and integrated backend APIs for chatbots and live chat features into the dashboard, enabling seamless data visualization.
- Revamped and optimized backend code by eliminating duplication and improving overall code quality.

## PROJECTS

---

### Nepal Bank Limited Dashboard

- Chatbot Dashboard System built using AngularJs, Node.js, and LoopBack 3.0 for API development.
- Provides a user-friendly interface for visualizing and managing chatbot data.
- Includes role-based access control for bank users to view analytics and manage users based on roles.
- Delivers a smooth and intuitive experience for viewing real-time chats received through the chatbot.
- Offers a built-in scheduler and campaign management feature to configure and prioritize campaigns for companies.

### AuthyProduct

- Blockchain-integrated full-stack web application that verifies products using cryptographic hashes.
- Integrated blockchain in APIs, ensuring secure and tamper-proof verification.
- Hashed data and validated against blockchain responses for authenticity.
- Successfully added data to the Hyperledger Blockchain Explorer network with verified transaction IDs.
- Verifies product authenticity from both the blockchain and Node-based backend.
- Includes AI-powered counterfeit detection using OCR technology.

### Loan Management System (LMS App)

- A full-stack web application built on Hyperledger Besu for secure and transparent loan verification.
- Enables users to upload and verify loan documents with blockchain-backed integrity.
- Maintains detailed audit trails for end-to-end loan tracking and accountability.
- Implements six distinct roles across the loan verification lifecycle to ensure secure, role-based workflows.
- Hashes every loan record and its categorized fields using SHA-256 cryptographic hashing for tamper-proof storage.
- All API calls interact with both the Hyperledger Besu blockchain network and MongoDB for dual-layered data consistency.

### VM Management System

- Virtual Management desktop system that manages users and virtual desktops.
- Payment feature integrated with PayPal.
- Interactive charts and user-friendly UI.
- Integrated cronjobs to send emails and automatically disable users and companies.

## EDUCATION

---

**Prime College**  
*BIM - Bachelor Of Information Management*

**2019 – 2024**  
*Kathmandu, Nepal*

## CERTIFICATIONS

---

• MERN Stack Development - Broadway Infosys

*12 Mar 2023 – 12 Jun 2023*
