Summary:

Java Developer with hands-on experience in backend development and building secure, scalable web and fintech applications. Proficient in Java, Spring Boot, REST APIs, and cloud deployments (AWS, Azure). Strong foundation in object-oriented programming, data structures, and algorithms. Experienced in integrating payment gateways, building APIs, and delivering efficient, user-centric solutions.

Technical Skills:

Programming Languages: Java, JavaScript, TypeScript

Backend: Java (Spring Boot), Node.js, Express.js

Frontend: React.js, React Native

Databases: MySQL, MongoDB

Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, API Gateway), Azure (basic)

Tools & Libraries: REST APIs, Hibernate/JPA, JWT, Maven, Git

Others: Algorithms & Data Structures, Multithreading, Security (RSA/AES encryption, HMAC validation)

Experience:

RemitPe (Remote) – Backend Developer | July 2024 – October 2025

- Developed and maintained secure and scalable digital banking features, including API-based payment gateway integrations.
- Integrated IndusInd Bank APIs for seamless financial transactions.
- Implemented security measures such as RSA/AES encryption, HMAC validation, and PCI-DSS compliance.
- Built RESTful services with Node.js and collaborated on backend architecture suitable for microservices and cloud deployment.

Zeenopay (Contractual Project) – Full Stack Developer | Jan 2024 – June 2024

- Designed and implemented robust backend APIs and integrated multiple payment gateways (Fonepay, PhonePe, Stripe, PayU).
- Deployed backend services on AWS ensuring high availability and scalability.
- Collaborated with frontend and DevOps teams to troubleshoot critical payment workflows.

Projects:

[Github Link](#) **E-Commerce Web Application:(SpringBoot)**

Developed a Spring Boot backend with RESTful APIs for product management using Spring Data JPA and MySQL/H2, enabling full CRUD operations and seamless database integration.

[Github Link](#) **Social Media Backend (Node.js, Express.js)**

Developed a YouTube-like backend with features for tweeting, commenting, uploading videos, and storing photos using Multer and Cloudinary.

[Github Link](#) **Dijkstra's Algorithm (C++)**

Implemented Dijkstra's algorithm to find the shortest path between nodes in a graph. Used C++ to create an efficient solution with a priority queue to optimize the algorithm's performance. The project helps visualize pathfinding in a weighted graph.

[Github Link](#) **Blinkit Clone (React Native, Fastify)**

Developed a mobile application using React Native for the frontend and Fastify for the backend, enabling users to order groceries seamlessly. Implemented features such as delivery partner login and authentication using JWT for secure access.

Education:

Sept 2021 – May 2025 **Bachelor's of Technology in Computer Science** University

School of Information Communication and Technology (GGSIPU), Delhi CGPA: 7.7

Positions of Responsibility

- Placement Coordinator at Training And Placement Cell USICT
- Program Coordinator at Annual Sports Meet
